

**REPORT to the
CONSERVATION MANAGEMENT DIVISION of the
LEUSER MANAGEMENT UNIT**

ACTIVITY AND PERFORMANCE REPORTING FOR THE RHINO PROTECTION UNITS

**Consultant Rhino Conservationist:
Dr. Nico J. van Strien
Program Officer Asian Rhino Specialist Group**
Julianaweg 2, 3941 DM Doorn, Netherlands

1 November - 1 December 1997

INTRODUCTION

Since 1996 a number of **Rhino Protection Units (RPUs)**, have been operating in the other important rhino areas in Malaysia and Indonesia, mainly funded through the UNDP/GEF Rhino Conservation Project - *Conservation Strategy for Sumatran Rhino in Southeast Asia (Indonesia and Malaysia)*. In addition to the five teams operating in Gunung Leuser there are currently over 30 teams in 9 areas in Sumatra, Peninsula Malaysia, and Sabah.

The activities in each country are coordinated by a **Program Manager** and a **Rhino Conservation Officer**. In Indonesia the Rhino Conservation officer is the Director of Conservation Area Management and Flora and Fauna Protection (**BKFF**) within PHPA. The Program Manager is Drs. A. A. Hutabarat. The overall program is coordinated and guided by the Program Officers of the Asian Rhino Specialist Group (**AsRSG**), with administrative support provided by International Rhino Foundation (**IRF**), and Yayasan Mitra Rhino (**YMR**).

Currently new agreements are being developed between AsRSG, IRF and YMR, and the Governments of the range states, for the continuation of the RPU activities with funds derived from donors and from ecotourism development in key rhino areas.

To increase the coordination between the areas and to be able to present the authorities and the donors with uniform and concise information on the effectiveness of the RPU activities, a standardized **RPU Activity and Performance Report** has been developed to be used in all areas of operation.

It is recommended that the Leuser Development Program and its partner institutions, use a similar format to report to the relevant authorities and donors on performance of the Rhino Protection Program in the Leuser Ecosystem.

Consultant reviewed all the reports from the teams currently operating in Gunung Leuser and summarized their activities and findings in Appendix 1-7.

The current format of the team reports used in Leuser does not allow a detailed analysis of the routes and distances walked, nor of the sign of rhinos and the disturbance encountered, and therefore it is not possible to extract all parameters needed for the standard RPU Activity and Performance Reports.

So far the activities of the Leuser Anti-poaching teams have concentrated on security of the rhino and in that respect they have been very successful. Since their operations started in about 1991/2 no more rhinos have been lost in the areas under observation, effectively stopping the decline of the rhino population and allowing natural recovery in the key rhino areas. The teams have not been trained for navigation, reporting and data collection, and they have operated largely without field supervision.

To improve the effectiveness of the teams a special training program should be established, to upgrade basic field practice skills and rhino and wildlife monitoring. Also **Field Supervisor and Instructor Teams** should be established, initially one for the Mamas - Kompas teams and one for the Kluet teams, consisting of two specialist rangers.

The Field Supervisor and Instructor Teams should be instructed by the Project Staff and the Consultant Rhino Conservationist, in the techniques and procedures required for navigation, monitoring and enforcement. Later on the Field Instructors will train the Anti-poaching Teams during

regular field surveys.

Attached are sample sheets of the Rpu Activity and Performance Reports recommended for use in all rhino areas where RPU's are active.

CONTENTS

The recommended contents of the **Activity and Performance Reports** are:

1 - RHINO AREAS and PATROL AREA MAP (Current situation)

showing:

- A - The boundary of the **Conservation Area** (National Park, Forest reserve etc) or the area of **Suitable Rhino Habitat** (basically the contiguous forest area) whatever is applicable;
- B - The approximate boundary of the **Rhino Area** (*the area actually occupied by Rhino*);
- C - The **Patrol Areas**. Patrol areas should be named or numbered for easy reference¹.

2 - LIST OF ACTIVATED RPUs and RPU PERSONNEL (Current situation)

listing:

- A - The **Name or Number** of the RPU;
- B - The **duty station** of the RPU;
- C - **Name of RPU leader**;
- D - **Name RPU members**.

3 - RPU ACTIVITY REPORT (Per year)

listing:

- A - The **Name or Number** of each RPU;
- B - The **weeks of Field Activity** for each RPU.

4 - FIELD OBSERVATIONS and PATROL INTENSITY REPORT (Per quarter year).

listing:

- A - All **Patrol Areas** identified on the Patrol Area maps;
- B - **Number of Rhino Signs** encountered;
- C - **Number of Poaching Signs** encountered;
- D - The **Work Done**, expressed in **Team Days** and **Kilometers Walked**.

5 - PATROL AREA DATA (Current situation)

listing:

- A - All **Patrol Areas** identified on the Patrol Area maps;
- B - The **Size** of each Patrol Area;
- C - The **estimated Number of Rhino**;
- D - The **Poaching threats** for each area.

¹ The nature of the terrain, the severity of the poaching threats and the available manpower must determine the size of each Patrol Area, but it is recommended that Patrol Areas do not exceed 10,000 - 20,000 Ha, and that they have 'natural' boundaries (rivers, watersheds, etc). Patrol areas should only be designated in areas where rhino occur or in areas that are important for protection of Rhino habitat.
