THE ZOOLOGICAL SOCIETY MAGAZINE

This delicate treefrog lives amid the clamor of mountain brooks in the cloud forests of Ecuador.

ABOUT THE COVERS

FRONT: This tranquil scene—a black rhino chomping herbs, cattle egrets snatching up insects—belies the disaster visited upon large mammals in Africa by way of slaughter for profit and habitat loss. The situation seems bleak but there may be hope, for conservationists are at work. Page 30. (George W. Frame)

BACK: The camel—as supercilious a visage as you're likely to encounter in the animal kingdom. Known today only in the domestic state, the desert-adapted dromedary will probably decline along with nomadic life in the Sahara. Page 35. (Nadine Orabona)

FEATURES

- ARTICLE BY EDWARD R. RICCIUTI
PHOTOGRAPHS BY
G. ALLAN BROWN
- 15 Allure of the Lure
What motivates fish to bite?
- BY CLAYTON F. FREIHEIT
- 20 No Room at the Zoo
The ark is becoming overcrowded, forcing zoos to curtail breeding of even rare and endangered species
