Executive Summary:

The decline of Sumatran and Javan rhino has been in process for a long time. The Javan rhino for example was eliminated from Malaysia in the 1930's. Meanwhile, following the Sumatran rhino PHVA (1993) indicated that the decline of Sumatran rhino probably 50% during the last decade. The total population of Sumatran rhino in Indonesia is estimated only 215 – 319 and will be extinct for the next decade if there are no appropriate and serious management. (Strategy and Action Plan for the Conservation of Rhinos in Indonesia 2007 – 2017). Rhino decline in South East Asia is due to a combination of reduction in habitat and over exploitation of rhino (most recently by poachers after the horn). At this time, poaching pressure continues to be high in Indonesia, hence there is a strong need of this country to emphasize anti-poaching activities. To this the rhino protection program of Yayasan Badak Indonesia (YABI) is activated to answer the need. Rhinoceros is subject to poaching pressure both from hunters and form trappers, they use wire snares and other traps that maims to kill animals. The method employed in poaching prevention are primarily in forms of field patrols to search for traps and other signs of poaching attempt, to destroy these traps, and to collect evidence to identify and apprehend the suspects involved. While in support to field patrol intelligence activities is operated to assist in the apprehension of poachers and identify the routes of illegal trade of protected animal parts (horn, skin, hooves etc.).

The Indonesian Rhino Protection Program of YABI integrates partners of governmental and non-governmental namely Directorate General of Forest Protection and Nature Conservation of the Ministry of Forestry, International Rhino Foundation and World Wide Fund for Nature as well as local villager. The program entails series of approaches that included wild population protection by intensive patrolling of areas to detect traps and arrest intruders, more intensive and extensive surveys and monitoring of the rhino population and intelligence operations to assist in the apprehension of poachers and identify of routes used for the horn trade and establishment of rhino database system using the Geographic Information System (GIS) techniques.

The Indonesian Rhino Conservation Program (that was originated from GEF Project and that since 2008 has merged into YABI) and this Rhino Protection Program of YABI fully understood that the program is very costly. But, it is important to bring an understanding the operation of Rhino Protection Units (RPUs) backed-up by Intelligence and Law Enforcement Unit (ILEU) is the most effective measure in protection of rhinos in the wild. Therefore it is important to develop a simultaneously funding plan for sustainability of rhino conservation program.

Introduction:

The decline of both species of rhinoceros, Sumatran and Javan, has been in process for a long time. The population of Sumatran rhino has been reduced to 50% in the last decade and will be extinct for the next decade if there are no serious and appropriate management of rhino. Its decline in range and number in Sumatra is attributed chiefly to fragmentation of its habitat through indiscriminate forest clearance and to poaching, stimulated by the illegal trade in horns, skin and hooves, and other parts of rhino's body.

A population and Habitat Analysis conducted in November 1993 in conjunction with the IUCN SSC and its Conservation Breeding Specialist Group (CBSG) and the AsRSG revealed a significant decline in the numbers of Sumatran rhino in Indonesia. The estimates that emerged from the new data and more rigorous assessment was arround 200 (215 - 319). Meanwhile, the previous estimate had been 420 - 875. The GEF project RPU YABI estimates that until June 1998 the presence the population of Sumatran rhino in Kerinci Seblat National Park 27 - 32, Bukit Barisan Selatan National Park 40 - 50, and Way Kambas National Park 24 - 30

Although the Javan rhino population in Ujung Kulon National Park seems to be holding at about 30 - 47 as reported by National Park Office in December 2011, yet the threat of poaching still remains. The loss of rhino has become a matter of global concern. In 1994, at least one rhino was poached in Ujung Kulon and a suspect has been identified but no prosecution has in progress at that time. Between May and June 2010, there were skeletal of 3 carcasses of Javan rhino had been evacuated from the field without any evidence of poaching or diseases. Although rhino poaching evidence and or attempt was not found

during this quarter, poaching of other wildlife such as small mammals, birds, fish were still occurring.

Saving the remaining rhino population needs further alternatives. There should be series of efforts to protect the remaining population by activating rhino patrol and strengthening its anti-poaching activities, until poacher activity and habitat.

dectruction is reduced to the point of elimination. The other activity which has just been implemented following the "Strategy and Acton Plan for Conservation of Indonesian Rhinos 2007 - 2017" is the follow up process in developing the Javan Rhino Study and Conservation Area (JaRhiSCA) in Ujung Kulon National Park, Banten. The project launched by Governor of Banen and Minister of Forestry on 21 June 2010 had gone through various discussion and public consultations and could only be started by July 2011. The fencing part of the JaRhiSCA has to b halted awaiting for a complete management plan while habitat management in forms of control of the arenga palms has been continued. The 4th quarter has been utilized mainly for discussion, desimination and inertretation of the benefits of the project in order helping the Javan rhino to survive.

With the development of grid system and arenga palm control sample plots a distict result has shown that 2 male rhinos stay in JRSCA during this whole quarter.

Following a collaboration between YABI and Eijkman Foundation then technical training by Eijkaman for YABI staff in rhino genetic sample collection and provision of genetic marker by Aaranyak Foundation to Eijkman, YABI has inniciated survey genetic in this Quarter. By using DNA analysis from collected dung, hair, or other part of the rhino sample out of both Sumatran rhino (in BBS and Way Kambas) and Javan rhino (in UK), It is expected that we could identify all rhino individulas, its sex distribution, and its genetic relatedness.

The Protection Program of YABI provide protection from poaching and habitat disturbance for viable nucleus populations of Sumatran and Javan Rhinos through the establishment and operation of Rhino Protection Units, and supporting management, coordination and supervisory structures. Formerly, YABI had been operated 17 Rhino Protection Units (RPUs) until middle of 2009, while due to shortage of funding in this quarter, only 16 RPUs continued their operation in and surrounding areas of Bukit Barisan Selatan (7 RPUs), Way Kambas (5 RPUs) and Ujung Kulon (4 RPUs) National Parks. Specifically for the Ujung Kulon site RPU has to better pay attention to the JRSCA since 2 rhinos are occupying while the fence has not been built yet.

Objectives:

The objective of the Program is to contribute to the long-term viable conservation and management of Indonesian rhinos (the Javan rhino - *Rhinoceros sondaicus*, and the Sumatran rhino - *Dicerorhinus sumatrensis*) and their habitats in Java and Sumatra.

The Indonesian Rhino Protection Program of YABI itself addressed to enhance the capabilities of the Directorate General of Protection and Nature Conservation and associated wildlife agencies to arrest and reverses the decline of rhinoceros due to poacher activity and habitat disturbance toward the national and global goal of recovery of viable populations of rhino species in Indonesia.

Output:

- 1. Establishment and operate of at least 17 Rhino Protection Units (RPUs) in Sumatra and Java.
- 2. Establishment and operate Intelligence and Law Enforcement Unit to support law enforcement process which is undertaken by RPU and Park authority or proceed to identify information of threats from ILEU's informants for further judicial process.
- 3. Community facilitation for better livelihood and to reduce threats from surrounding community.
- 4. Development of Assistant Manager Protection of Sumatra that is responsible for the protection and ILEU in both BBS and Way Kambas area.

Changes: -

Progress:

The Rhino Protection Program of YABI provide protection from poaching and habitat disturbance for viable nucleus populations of Sumatran and Javan Rhinos through the establishment and operation of Rhino Protection Units (RPUs), and supporting management, coordination and supervisory structures. The outcome of operations of 7 RPUs in Bukit Barisan Selatan National Park (BBS NP), 5 RPUs in Way Kambas National Park (WK NP) and 4 RPUs in Ujung Kulon National Park (UK NP) is reported as seen in Annex 1. (RPUs Activities Report Periode October - December 2011.), as per attached.

During the implementation of this activity such as surveys and patrols the RPU/RMPU achieved numbers of surveys, distance walked and duration of time they have consumed in every each of their activities. The Team also encountered many cases of illegal activities/offenses in the National Parks, into which prosecution had been made through filing the cases and hand over the cases to local Police Stations.

The achievements of the Protection Program for this period *October – December* 2011 is described below in *Annex* 1.

Records on illegal killing of animals and other forest offenses detected by both RPUs (BBS, WK and UK) and ILEU is shown in *Annex* 2. Then the map which showing patrol route, the rhino foot-print distribution encountered and location of illegal activity are shown in Annex-3. It can be noted that illegal activities in Way Kambas especially poaching for large animals had started again but successfully notified and stopped by RPU with dismantling of 9 snares in the northern parts of the park.

The field days per month of RPU's personnel is shown in Annex-1.

Intelligence and Law Enforcement Unit (ILEU) has been operating to identify the threats which come from surrounding people or outside of the Park; its operations also covers identifying possible facilitations for raising local's alternative income in order to reduce threats to the park and its rhinos . There are only 3 personnels in this unit that have to work in collaboration with informants, RPUs, Park Rangers and Police, in the case that they have a confirmed case and have to apprehend/arrest the suspect/s for further law enforcement efforts (judicial process). Although ILEU's base operation is in BBS and surroundings, they also available to assist ILEU operation in both WK and UK NPs.

ILEU's findings of their activities, together with RPU BBS findings, is reported in Annex-2,

Conclusions and Recommendation:

In this period, the average number of field days per month of every person of RPU has lest the Program required of 20 days per month.

But RPU UK reached the highest (21.33).

RPU BBS has achieved 17.26 from their 18 patrols/surveys activities (out of their total 48 activities). The other activities they involved were in collaborative operation, especially to remove encroachments.

RPU WK achieved 16.98 as the result of only 11 of all their 79 activities were patrols/surveys. While their other activities were involvement socialization/awarness in surrounding villages adjacent to the Park.

In UK, achieved the highest field days per month of every person 21.33 from their 12 patrol.

There was a direct sighting of a rhino in BBS, detected footprint of a young rhino and the female, and also encountered 127 rhino signs. While detected 38 signs including a young rhino in WK and 88 signs in UK.

In BBS, RPU arrested 4 suspects of illegal logging for judicial proses. Detected and inactivated 18 snares which mostly for small mammals.

In WK, arrested illegal fishing (37), grazing (11), Inactivated 9 (Check!!!) snares 1 for large animal and others for deer and wildboar. They were also detecting 288 ha of after fire (burned) area, fish poisoning in Way Negara Batin River and 1 elephant raid/attacking to plantation.

In UK, 7 suspects of bird trapping and 3 encroachment activity within JRSCA area.

The Program had found many rhino footprints in this period but it cannot be utilized to determine the number of rhino population. It still needs to be analyzed with the sophisticated method.

QUARTERLY ACTIVITY
AND PERFORMANCE REPORT

1 OCTOBER - 31 DECEMBER 2011 (Q4)

RPU-BBS BUKIT BARISAN SELATAN NATIONAL PARK

Millstones:

- 1. Direct sighting of 1 rhino.
- 2. Detected foot-prints of a young rhino and the mother (29 of Nov. 2011).
- 3. Training and collection of faeces/dung and urine samples for DNA analysis.
- 4. Detected and inactivated 18 active snares for non rhino mammals.
- 5. Collaborative Operation to remove encroachment (58 ha) and detected other encroachment 100 ha.
- 6. Arested and accomplished the investigation of suspects on encroachment and illegal logging (4); then submitted to attorney.
