## Introduction

This is the 12<sup>th</sup> edition of the International White Rhino (Ceratotherium simum spp.) studbook and includes both the Southern White Rhino (Ceratotherium simum simum) and the Northern White Rhino (Ceratotherium simum cottoni). Where no distinction is made concerning subspecies, data will be inclusive of both subspecies. The last printed International Studbook for the White Rhinoceros was published in January 2009. Many people have contributed to this update; thank you to all of the world wide holders of white rhino who provided me with their data, thank you to Lars Versteegen the EAZA/EEP White Rhino studbook keeper who was extremely helpful in clarifying and steering me in the right direction, Takeshi Ide of the Yagiyama Zoological Park Sendai (Japan) who helped with the JAZA data and Laurie Bingaman Lackey for her stewardship of the data and endless help.

### White Rhino Status

The Southern White Rhino (Ceratotherium simum simum) is listed as CITES appendix I, Near Threatened and is now the most numerous of all the rhino species with over 20,000 worldwide (African Rhino Specialist Group, 2011).

The current living captive population of Southern White Rhino (Ceratotherium simum simum) stands at **298.405.3 (706)** at **197** institutions. Records indicate that China has imported 141 White rhino since 2000; none of these have been documented in this studbook and are not included in this total.

The Northern White Rhino (Ceratotherium simum cottoni) is now thought to be extinct in the wild, with only one sighting in 2007 and none seen in surveys taken in 2008. The captive population stands at **3.4.0 (7)** at **3** institutions.

# Studbook Terms

---

**Stud#:** Animal's permanent studbook number. Studbook numbers may not always be assigned chronologically, due to animals being recorded as they become known to the Studbook Keeper.

**Sex:** M for male, m for castrated male, F for female, f for contracepted/neutered female, U for unknown sex

**Birth Date:** Animal's birth date. A tilde mark, '~', before a date indicates that it is approximate. '??' indicates that the date is unknown.

**Sire and Dam:** Studbook numbers for the animal's sire and dam. 'UNK' if unknown. 'MULT' if several candidates have been identified. 'WILD' if the sire or dam was considered to be wild this animal is a founder.

**Location:** The institution holding the animal at the time. If the animal is no longer traceable by the Studbook Keeper, 'lrf' (lost-to-followup) will appear to the right of the last known location.

**Date:** The date on which the event occurred. A tilde mark, '~', before a date indicates that it is approximate. '??' indicates that the date is unknown.

**Local ID:** The identification assigned by the specimen's location, often its ISIS number, house number, or occasionally house name.

**Event:** Capture, Birth, Transfer, Loan, Ownership change, Death or Release

**Identifiers:** House Name, Transponder
