

RHINOCEROS DATA

BY R. T. REUTHERFORD

Mail to Romane

On the night of 1 January 1972, a male black rhinoceros was born at the San Francisco Zoological Gardens, the first in our history. Stimulated by this significant birth, I have composed a list of captive births of black rhinoceroses known to me. It is very encouraging to note the significant increase in captive births in recent years of this rare species. Our baby was born 13 months and 3 weeks after known last copulation of the parents. Several other observations of copulation in black rhinos (in one case within 2 or 3 months of birth) suggests that copulation may occur after conception and thus gestation measured from last copulation is not always valid.

Most authors give gestation as 450 to 480 days, although Jarvis and Morris give the average as 540 days (at uncited locations) and Kloss and Fradrich give 432 to 463 days. More critical research is needed to verify gestation.

A baby was born at Pittsburgh to captive born parents; the father was 5 years, 10 months, 19 days old and the mother 6 years, 9 months, 12 days old; assuming a 15 month gestation, the father was approximately 4 years, 7 months old at breeding and the mother 5 years, 6 months old.

At Los Angeles the same mother produced calves 17 months apart, the young being hand reared.

A mother at Kobe Zoo produced calves approximately 24 months apart.

A male born at Bristol Zoo was still nursing at 19 months.

Mary, a female, still alive at the Brookfield Zoo, has been at the zoo 38 years and appears to be the longevity record to date. Player and Feely cite a female white rhino still producing calves at age 36.

Goddard found mean expectation of life at birth in wild black rhinos in East Africa as 8.4 years, a mean calving interval of 2.5 years, assumed mean age of maturity of 5.5 years, and evidence for reproduction into very old age.

He believes one wild black rhino reached sexual maturity at 4.3 years of age and another at 4.5 years of age.

In volume 11 of the International Zoo Yearbook, there were listed 130 black rhinos in captivity with 27 captive born.

Chronological List of Captive Born Black Rhinoceroses*

1.	Sex	Name	Zoo	Birthdate	Remarks
