

statement on the net figures for 1929? These would give an entirely misleading idea of the comparative numbers of fish entering the river in 1929 and before.

In fact, though there have naturally been fluctuations, there is no doubt in my mind that the numbers of spring fish have decreased consistently since 1929.

### A SQUIRREL QUESTION

SIR,—When walking through a covert on our small syndicate shoot in Hertfordshire with my partner and my two boys, on two separate occasions, in the same part of the same wood, a grey

Westwood, Great Shelford, Cambridge.

### ELEPHANT AND RHINO

*From Sir Eric Studd, Bt.*

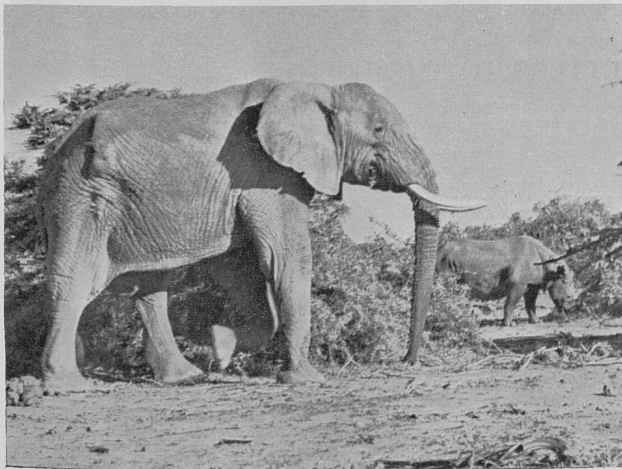

SIR,—I enclose a photograph (*below*) recently taken in the Amboseli Game Reserve in Kenya.

It shows an elephant and a rhinoceros in the same picture, which is unusual. We also photographed four rhinoceros lying down together, and obtained a close-up of rather a fine lion.

The pictures were all taken from a car and the animals took not the slightest notice of us.

ERIC STUDD
